Don't forget to read the content of this page for any questions.Q: Json Object get variable to call class method I am stuck at this and cannot figure it out. I have a collection of json objects which I am converting to c# objects. I need to create a new instance of the derived class from the json response and do something. Here is my json response. [{"ID":"3","Title":"Mr","House":"Sealand Estate"}, {"ID":"4","Title":"Mr","House":"Mundane"}, {"ID":"5","Title":"Ms","House":"Mundane"}, {"ID":"6","Title":"Mrs","House":"Mundane"}] Here is a class derived from the json response public class Department { public int ID { get; set; } public string Title { get; set; } public string House { get; set; } } I am trying to use the constructor to create a new Department object. public Department GetDepartment(string ID) { Department department = new Department(); return department; } I am trying to do something like this string id = row["ID"]; Department department = new Department(); json = JsonConvert.DeserializeObject(row["Title"]); A: class Program { class Department { public int ID { get; set; } public string Title { get; set; } public string House {
