The first generation of AutoCAD lacked the pre-programmed command set of most other CAD programs, and the user interface (user interface) was a non-standardized command menu interface with separate tools that resembled a spreadsheet. The program was developed by engineers who saw the process of design as distinct from the tools available in the industry, and who wanted to streamline the design process by reducing the time spent searching for the right tool among the myriad of similar-looking tools. It was also developed by the Autodesk product management team to help company salespeople by replicating the look and feel of their other desktop programs. The result was an interface that was easy to use with a low learning curve, but which also lacked many of the more advanced features of other CAD programs. Its command set, which has only minor variations in the subsequent versions, was derived from drafting skills. Although AutoCAD lacked the more complex features of other CAD programs, its functionality was sufficient to allow designers to create drawings for most projects. Design: There are two main ways of using AutoCAD: drawing and documentation. The drawing feature is the most commonly used application of AutoCAD. It is the way to create a drawing or a sheet, so the drawings are called sheets. Sheet The autoCAD sheet is the term for the AutoCAD document object. The sheets that make up a drawing are not static and can be changed by the user at any time. A drawing is made up of a set of sheets. Each sheet has a name, description, dimensions and layers. Sheet Settings There are different type of sheets that can be created. The standard sheets are named Sheet1 through Sheetn. The Sheetn option allows the user to create unlimited numbers of sheets. The user can select a specific sheet by assigning a name to the sheet. Once a sheet is named, the user can change its dimensions and its description. The description can be filled with a name or an image. Layer Settings The layers of a drawing can be named, dimensioned and annotated. A layer is a setting that defines the viewing transparency of a drawing. A drawing has a number of layers and can contain an unlimited number of layers. The user can name and dimension all the layers of a drawing, and can attach a title and description to each layer. The user can remove the drawing from a layer. Selection Settings The user can select any object

Award-winning author to talk about 'The One That Got Away' Jefferson City native, American Literature award-winning author, Ron Van Ormer, will be in the Library May 5, 2013, to talk about his new book, "The One That Got Away" and offer some of his insights into writing, marriage and what a father and husband has taught him about life. "I'm excited to be in the Jefferson City Library, which has a long and rich history of being in the forefront of things," Van Ormer said. "I've been a reader all my life, and I love that I get the chance to talk to people about my favorite thing, reading." Van Ormer will speak at 3 p.m. in the library's Community Room. "In July, I was invited by my publisher, Longstreet Press, to be a featured author at the Newberry Library in Chicago to talk about my book, 'The One That Got Away.'" Van Ormer said. "That experience really resonated with me, because of the uniqueness of that library. You go there for a great idea, and you feel like it's taken you to another world, a world of the mind. It's a perfect venue for me to speak, because it's about writing, it's about ideas." Van Ormer will be talking about the inspiration for his book, "a tough thing to do, because when I try to describe it, it sounds too simple. It's about the pain of a marriage breaking up, and I get to weave in my own experience of going through that. "The overall theme is about love. It's about my experiences with two very different women. I've only had one chance at marriage, and so I want to share what I learned with other people. I'm hoping people will enjoy the book as much as I enjoyed writing it." Van Ormer is a writer, artist and photographer with a B.A. in Photography from the University of Missouri. He has written 10 books, "The One That Got Away" and "The Count of Monte Cristo," among others, and has won both the National Book Critics Circle Award and the American Society of Magazine
