The Joy of Choosing: Casinos – Robust and Reliable They are.[Osteoid osteoma and dens invagination of the bone - an about a case].

Osteoid osteoma is a small, well-circumscribed, spherical lesion characterized by intraosseous osteoid and reactive woven bone. It is usually centered in the metaphysis of a long bone. Dens inversion is a rare pathology of unknown etiology. It is characterized by an appearance of a bone pseudo-lacunae at the level of the dens of the bone and parosteal osteosclerosis. The case report is of a 15 years old girl treated for

an osteoid osteoma of the right calcaneus, with an osteosclerosis as usual, and a dens inversion of the left calcaneus, which associated to a caocotyliation of the left talus, making a case of bilateral pathology.

The literature is about rarely the concomitance of the two pathologies, the majority of the cases of dens inversion are treated by surgery without relapse in a 1 to 7 years follow-up. The removal of the cause, the Ficat staging and the treatment of the osteoid osteoma in the proximal femur, gave a good result with the absence of relapse in a 3 years follow-up.

However, if you are looking for a location in space, then the thing you are looking for is not necessarily a place, but rather a direction, like: The
