So far, you've chosen to utilize the .NET Framework 4.5 whenever you had to create .NET applications. However, in more recent times the user interfaces and designs of .NET applications have been greatly improved and refined. There has been a lot of user interface control and consistency added to Windows Forms (both .NET Framework 4 and .NET Core) and with Windows Media .NET applications. Many applications which have been built for the .NET Windows Runtime and now run on the Universal Windows Platform (UWP) using .NET Core have a touch optimized and feature rich experience, and a clean and smooth user interface. Even simple applications built for the .NET Framework 4 can look pretty good on Windows 10. In order to create a smooth application user interface you will need to update the UI elements to the latest UI templates and styles. Most of them are hidden within the .NET Framework 4 under a different folder; this is why you should go to the .NET folder in the Visual Studio Installation folder, open the .nuget folder and start to browse through the XML files. The .NET Framework 4.5 installation package includes the .NET Framework 4.5 and it contains many more features than the .NET Framework 4, so make sure you browse through the .NET 4.5 installation for the full list of features it contains and then install it only if you need them. The .NET Framework 4.5 provides a great many new features for .NET developers and .NET developers on Windows Forms, Windows Forms for Windows Runtime (WinRT) and Windows Media (WinMM) and it includes other important
