#### What's New In?

Passionato Player is a small, fast music player for Linux and Windows. The main features are:

- \* fast, full-screen mode
- \* fast navigation between items
- \* playback controls
- \* multiple

---

playlists and play mode \* CDDDB  
and MusicBrainz/CD covers \*  
switch between flac, ogg, mp3,  
vorbis, opus and wma \* random  
shuffle or repeat \* toggle  
between sleep and continuous  
playback \* appart from storing  
CD-DB/MusicBrainz metadata  
locally, it also fetches them  
from the internet, and can  
display all the covers from all  
the bands in the collection \* alp  
habetically/numerically/date-  
sorted or randomly sorted

---

playlists \* repeat forever (for CDs/downloads), or until play/stop \* fast changing view \* system tray \* auto-increment of track/album numbers \* can be configured to let you know when an item will be played/stopped \* running in background \* support for playing a long list of files, similar to the long list in Nautilus. This is only a subset of what Passionato can do, I plan to implement more features very

---

soon. Passionato Player is written in C#/.NET, but it's possible to use it with Mono. It uses the Xine/XMMS API for playback. This means that there are plenty of external libraries available for playing soundfiles, but that you can also use your own custom C# plugin with the GUI. You can install it using the archive downloaded from here: You can use your favourite package manager to install it. I have tested it with: \* apt-get

---

(aptitude, dselect, synaptic) \*  
fink \* RPM (Yum) \* I have not  
tested the fedora package yet, so  
if you try it and report  
problems, please use the  
bugtracker. To install it using  
your package manager, you just  
have to untar the archive to your  
favourite directory. You will  
find a file in the format of  
xxx.i386.rpm (where xxx is the  
name of the file, so it's a little  
bit up to your tastes). The file  
name must match the version of

---

your distribution. For example, the file in the RPM file for debian is named `passionato.i386.rpm`, and if you have `x86_64` version, then the name will be `passionato-x86_64.i386.rpm`. In that case you'll want to rename it to `passionato.i386.rpm`. After installing the package, you need

---

**System Requirements:**

Microsoft Windows 7 SP1  
NVIDIA, Intel, AMD, or  
PowerVR GPUs 2GB of RAM  
20GB of free hard disk space  
Broadband Internet connection  
OR Apple Mac OS X 10.10  
(Yosemite) or later USB  
joystick controllers Included  
game files: The Adventures of  
Pip Ninja Age: The Arena Star  
Wars:
