History AutoCAD's first version, AutoCAD 1, was released in 1982 and contained more than 10,000 commands. The first feature was a drawing grid that allowed users to draw straight lines of a specific size by specifying the height and the number of lines. The software also contained capabilities to work with blocks and shapes. This version supported only standard graphics hardware, such as a XGA display and a 486-86DX-4A processor. In 1983, AutoCAD 2 added further capabilities, such as the ability to connect to the BBS Net and a PostScript output engine. AutoCAD 3, released in 1984, supported Hewlett-Packard's HP-25 line of printers. AutoCAD 3 introduced the world's first database query language. This version was compatible with XGA displays and supported a 6502-based 68000 microprocessor. AutoCAD 3 also introduced the first Autodesk patent-pending color capabilities to CAD and drafting software. In 1986, AutoCAD 4 was released. AutoCAD 4 introduced several enhancements to the design and drafting capabilities of the software, as well as improvements to file compatibility. AutoCAD 4 supported the "big block" strategy, where all major design elements are made as large blocks. The software also featured dialog box automation, parametric and Dynamic Input tools, and enhanced drawing grid accuracy. AutoCAD 4 introduced the first version of 2D drawing automation that created a vector-based image from a predrawn image. In 1988, AutoCAD 5 was released. AutoCAD 5 introduced a new, interactive drawing tool. Also, a new file format was introduced that allowed the creation of up to 32,000 features on a single sheet. In 1992, AutoCAD 5.5 and AutoCAD 5.5 Server were released. AutoCAD 5.5 added support for the D&B Company's TI-89 and TI-92 calculator series, the HP-95LX Laserjet series, and other high-end printers. AutoCAD 5.5 Server added support for clients that use a Windows NT-based operating system. AutoCAD 5.5 introduced the World Wide Web (WWW) and WebCT. AutoCAD 5.5 Server introduced the WebCT server as a graphical interface to CAD data. AutoCAD 5.5 Server added features that allowed users

I am new to OCaml. I want to convert string s (e.g. "0.00000001") to a float or double in a function. A: What you are asking is not a general answer, but a specific one: how to convert a number into a floating-point format. In OCaml, there is no equivalent of the strtod and strtod functions from C/C++, there is only the tofloat function, that can convert an int into a float. You may find the tofloat function implementation in the standard library, in the F "unix" module. It requires OCaml 4.02 or later. Alternatively, you can use the float module from the Unix.fmt library to manipulate floats and strings, and the int module to convert numbers between int and float formats: let fprintf\_float s = Printf.fprintf stdout "%f " (Float.of\_string s) let int2float f = let open Int in fst (Float.of\_int f) The WWE has become an Olympic sport.
