History The software is a commercial product developed for both personal use as well as professional use. In 1992, Autodesk bought the company that developed the initial 2D drafting program, Keystone, to develop AutoCAD Activation Code. This company was purchased from the earlier owner, Microcomputer Systems, Inc (MSI), of Mountain View, CA. MSIs AutoCAD dates back to 1978 when Microcomputer Systems, Inc (MSI) was founded in Oakland, CA. This company was originally founded by renowned MIT Professor William Hawkes, he later joined by Robert Szeliski and Bill Cissells. They developed the first 2D drafting program, Keystone. The company was later purchased by Sun Microsystems who renamed the software to LaserSoft. After a few years, Sun was acquired by Novell. The software was then acquired by Autodesk. Tools AutoCAD has several tools for drawing, including a simple pencil, a digitizing tool (measuring and graphic), a linetype, and a tracing tool. Drawing tools Pencil: A light-weight drawing tool. Works on lines, splines, circles, and ellipses. It can be used to draw freehand and can be synchronized to the computer mouse. Digitizer: A tool used to make annotations and measurements. L-Tool: L-Tool is a pencil which allows the user to draw curves, splines, and circles in three dimensions. It has six different modes, which can be accessed by pressing one of the six buttons on the top side of the L-Tool. Tracing tool: A tool that can be used to draw over existing drawing and can be synchronized to the mouse. Multiuser tools ObjectARX tools: A set of proprietary tools which can be used in multiple desktops. The ObjectARX tools are included with AutoCAD, but may not be present on a user's computer or workstation. ArcTool: The ArcTool is a group of customizable tools which are used to draw and modify geometric shapes. Construction Tools: Used for drawing, detailing and other functionality related to building design. Architectural tools: Used for architectural drafting and design. This category includes tools for modeling design elements such as walls, beams, columns, and roofs. Electrical tools: Used for modeling design elements such as electrical circuits, electrical systems, and building wiring Floor and Wall: Allows drawing over existing 3D objects. General tools: Used for drawing, modeling, and other drawing functionality. Interactive features Customization Customization of AutoCAD is the ability of AutoCAD to make it behave in a way which is customized to the individual. These modifications are typically made either in configuration files or by editing a specific drawing by using functions such as the "Edit data..." menu. AutoCAD can be updated with customized software to include features for specialized industries, such as those involving the petroleum industry. Customization is a core aspect of AutoCAD that was designed to allow AutoCAD to function in multiple environments, and is not related to the personalization that is typically associated with multi-user environments. Customizations can be designed to work with specific industry or company standards, and can include tools for use in a specific industry or company ca3bfb1094

"... they have been living in the forest for six months now. The very first night after arriving in the forest the three sisters have begun making crude stone pisos. One sister named Vaishali has been making the pisos with some cobbles." I was extremely shocked to read about the way this family and its children were treated by the 'guardians of the forest' and thought of what I should do to help. "...the SIT has also informed the forest department of the presence of these people in the area and has asked them to provide all necessary protection to the group as well as to assist them in their efforts to live in the area. SIT has told the authorities that once the pisos have been constructed, the family will begin moving out of the forest area." This is what I did to help the family. I gave them free medicines and also asked them to send their children to schools. The children of the family, aged between 3 to 13, are very intelligent. They speak English very well and can read books in English. They are brilliant in school, especially in English and mathematics. The younger ones can speak and write English. Every year there is a festival in the area. When the children come out of the jungle they are very excited. We ask them about their excitement and the older ones show how they dance and sing in front of the cameras. Their dancing and singing are even better than the popular Bollywood songs. I think the forest department is very irresponsible in not taking steps to protect them. The government should take measures to protect this family and their children and to make them free. Otherwise they will continue to live in the forest. There should be a compensation for their loss of lives and their freedom
