For emergency physicians, learning about neuroplasticity helps to explain why people will demonstrate remarkable resilience after a traumatic injury or illness. One example I like to use is my own experience as an EMS lieutenant. As a teenage boy, I would shoot hoops before summer vacation, after a long morning of work, or in the evening before going to bed. I could take a rusty elbow shot to the head, feel no ill effects, and be back at it the next day. The same acuity is observed in many aspects of children's neurodevelopment. Imagine my delight, or that of many others, when I found an article on the subject in the Bulletin of the American Academy of Pediatrics (June 2005, January 2007) indicating that young children with autism and traumatic brain injuries have "increased cerebral volume (greater brain size)." All that to say the brain's ability to adapt to its environment and environment's ability to alter brain function are similar in the short and long run. Take a look at this "neurotrophic factor" experiment conducted by researchers from the University of Illinois and Iowa State University's Department of Pharmacology and Toxicology. It shows the impact of overstimulation on the developing brain: Finding ways to communicate with the brain's ability to respond can help us remain balanced and open to our evolutionary mind. Early child neuroscience research indicates that the human brain develops distinct areas and tasks dependent on its environment. Thus, early stimulation-based environments seem to direct eye gaze to preferred stimuli. Our mission is to empower the next generation of healthcare professionals by providing the best available evidence-based information to advance EMS through well-intentioned online discussion and volunteer-based editing. The House Permanent Select Committee on Intelligence heard President Trump authorized Pompeo on March 22 to review Venezuela's role in seven different terror groups, including Hezbollah, al-Qaeda, and the Taliban. While addressing lawmakers, Pompeo claimed that Venezuela funded terrorism through its involvement in the FARC and ELN insurgencies. The committee also heard statements from Pompeo on Cuba, vowing that the U.S. would continue a "demilitarization" policy towards the country. "What we want is a Cuba that is a prosperous country. That is the goal," he said. "If that means for those who are Cubans who love freedom to live in their country, more power to them. But we will continue to try to bring freedom to that country." While the president's original travel ban was ultimately reinstated, his recent order to block all U.S. funds to the regime of Cuban President Raul Castro was blocked in court. Despite the news, Pompeo also defended the administration's policy towards Cuba, despite former Obama administration officials blasting the administration. "We are not going to change our policies towards Cuba," Pompeo said. "I think it is a misperception that somehow that relationship is going to change."(CBS4) - When you want to stay fresh during the summer heat, you can often find yourself reaching for bottled water. On a hot summer day, it's too easy to overlook the benefits of an ice cold glass of tap. For years, after seeing a documentary about Puerto Rico, the world was introduced to the idea of Puerto Rico, an island almost as big as Florida. In the past, much of what Puerto Rico was known for was tourism. But, due to a growing recession, the island is finding that the industry is more difficult to get off the ground. "That's when I started thinking about the fact that we are a natural resource. We have natural resources. We have the best beaches, the best diving and nature,"
