Photoshop CS5 includes a significantly improved cropping feature. Learn how to use it. You can use Photoshop to create camera-ready slideshows. This process is not difficult, but it does require your attention. Photoshop is a powerful tool, but the learning curve can be steep. You need to be very comfortable using the tool itself before moving on to the more challenging topics. Joining the Adobe team Even before you even begin to use Photoshop, you're important enough to the company that you're invited to go to Photoshop training. It's common for Photoshop users to join the Adobe as an artist, and the training program teaches many of Photoshop's basics. You can see and use your own work in the process. The program is intensive, so if you have never used a computer before, don't let that stop you. It's not as difficult as you may think, and there are some great resources on the web to help you through the process. In this book, I use the term Adobe instead of the more generic word computer. However, you don't need to understand Photoshop in order to use it; the basic principles of the program are universal. If you have a high-resolution image, it will look great, but if you have a low-resolution image, your edits won't show up as well. Keep this in mind when planning your project. It's easy to make mistakes when cropping, resizing, or editing an image, so it's a good idea to start small. A small

A unlocked brush can be used for any purpose and is a good tool to create gorgeous effects. To use a brush, click on the Brush palette with a right mouse button. A set of tool tips appears at the bottom of the window. Click on the tool that you would like to use and then use the brush to paint your design. The Brush Tool The Brush Tool is very powerful, but it can be a bit difficult to use for beginners. All you really need to do is to paint with it and let the tool do the magic. But if you want to be able to use this tool a lot, it's best to unlock some of the tool tips. You can click on the layer you would like to paint on, press and hold down the Alt key, and then click and drag the Brush Tool. [video:64929] If you drag too fast with the Brush Tool, the pixels under the tool can get blurred or smeared. To fix this, click again and then slide the mouse while holding down the Alt key.
